

Introduction to Crocodilian Husbandry

The Introduction to Crocodilian Husbandry workshop is designed to assist zoo professionals in understanding the captive maintenance requirements of crocodilians in zoos. Topics covered include basic anatomy and biology, physiology, behaviour, diet, housing and the essentials of husbandry for all crocodilian species. The workshop combines short theory and practical sessions, and aims to give you a strong grounding for working with these animals in your collection.

Your instructors have a combined experience of several decades working with crocodilians of all species.
